AutoCAD is a commercial CAD application designed for use in a number of industries, but especially in architecture and engineering. It is a popular choice for electricians and HVAC technicians as it provides the functionality to design and document electrical and HVAC systems. AutoCAD History AutoCAD's history begins with a software package called MicroStation. MicroStation was first released in 1975, and was designed to be used by engineers and architects to design and create 3D models of large engineering and architectural projects. MicroStation was eventually released for the popular minicomputer platform IBM PC, and was one of the first commercially available CAD systems. The next commercial CAD program was called MicroFlow, which was developed by KISCO Data Systems in 1976. MicroFlow was an engineering-focused program that was used to create and edit 2D drawings. It was the first program to support separate multi-user and single-user operation for the design and editing of a single 2D drawing. MicroFlow was successful, and it eventually became the industry standard for commercial software. In 1981, MicroStation was released for the Apple II platform, and in 1982, MicroFlow was released for the Apple II as well. These programs competed with the growing popularity of personal computers (PCs). Before AutoCAD, the only choice for a desktop CAD program on a PC was MicroStation. When Windows for Workgroups was first released in 1985, users could choose between MicroStation and WordPerfect for word processing and drawing. Both programs were eventually replaced by Microsoft's MS-DOS 3.3 (and later Windows 3.x) operating system, and both Windows for Workgroups and MS-DOS 3.3 are now considered legacy operating systems. Monday, October 9, 2016 Most pundits have agreed that the main reason Hillary Clinton lost the election is that she was found to be so deceitful in public and by law that the truth was concealed from the voters. The truth, that Clinton abused her powers of the State Department as Secretary of State to serve the hidden agenda of a close Clinton associate. You and I have known all along that Clinton was corrupt, a liar and the she held the American public in great contempt. Most of us knew what was going on and tried to warn you people but you didn't listen and now you are learning the truth. After I got in touch with a source who I knew was close to someone important at the State Department, I gave him Hillary's e-mail addresses. He then gave me all the e-mail he got sent to Clinton. I sent a copy of all those emails to our source to verify the authenticity of what he sent me. When the information was confirmed as authentic, we gave it to you folks. Now, after Clinton's loss we find out that her use of the State Department email server was well known by her and her aides. They were not concerned that her communications were not being preserved for public records. They were only concerned that no one could come in and read their e-mails. That is why they had her use the personal server that was connected to no phone lines and was located in a private residence. The only person who had access to
