The following guide contains a basic introduction to AutoCAD, with additional details in the AutoCAD 2016 Release Notes. More comprehensive AutoCAD tutorials are available from a variety of sources, including the Autodesk Support Center and Autodesk Education Institute. Basic AutoCAD Architecture The AutoCAD drawing canvas is composed of three main layers: Base Layer The Base Layer is composed of what AutoCAD calls graphic objects or 2D shapes. Every graphic object has a layer. The Base Layer can contain 3D objects (such as a drawing viewport), a 2D shape (such as a line, rectangle, or circle), or other graphic objects. The Base Layer is the lowest layer in the CAD drawing. Graphics Layer The Graphics Layer is where you create most of your graphic objects. You can add, modify, and delete graphics objects on this layer. You can move objects on the Graphics Layer by using the Move tool. If you move a graphic object, you're moving the object on the Graphics Layer. Text Layer The Text Layer is used to create objects such as text, dimensions, points, and labels. You can add and edit text on the Text Layer. You can move objects on the Text Layer by using the Select tool. If you move a text object, you're moving the text on the Text Layer. Layer Commands The following table lists the major tools available in the Draw menu. Tools Type Help Toggles; for example, Turn Off Export Layers. Advanced Options Actions This option sets the visibility of the Action Bar and the Global menu. Lines of Command Selects the command for the mouse click. Object Selects the object to be edited or added. Editing Selects the object to be edited or added. Object/Group Editing Sets the visibility of the Edit menu. Edit Indicates the visibility of the Edit menu. Viewing Change the current viewing options, such as screen, paper, view, and model. Display Shows or hides the current screen. Hover over a tool for more information about its purpose. Points Inserts a point at the current cursor position. Add Points Sets the visibility of the Add Points tool. Neoadjuvant chemoradiotherapy is considered the standard treatment in rectal cancer, although the benefits in terms of long-term survival remain unclear. The aim of this study was to evaluate the impact of neoadjuvant chemoradiotherapy on long-term survival in patients with locally advanced rectal cancer. A systematic review was performed using MEDLINE and EMBASE databases. Case-control studies comparing neoadjuvant chemoradiotherapy and surgery alone in patients with locally advanced rectal cancer were included. Meta-analysis was conducted to obtain pooled estimates for the disease-free and overall survival, together with a survival curve based on a random-effects model. A total of 16 prospective and 7 retrospective studies were selected. Median follow-up was 49 months. Overall, 5-year survival rate was higher with neoadjuvant chemoradiotherapy than surgery alone (61% versus 45%, $P=0.0004$). There was no difference in disease-free survival between the two approaches (65% versus 62%, $P=0.65$). However, in studies including only patients treated with concurrent chemoradiotherapy ($n=11$), neoadjuvant chemoradiotherapy was associated with significantly higher disease-free survival (72% versus 50%, $P=0.007$) and 5-year survival (64% versus 39%, $P=0.001$) than surgery alone. Furthermore, in this subgroup, the interval between neoadjuvant chemoradiotherapy and surgery did not affect the difference in disease-free survival between the two approaches (interval less than 6 versus 6-9 weeks; $P=0.09$). Overall, ca3bfb1094
