Today, AutoCAD is used primarily in the fields of mechanical and architectural design, civil engineering, and architecture. It is also used by people who work in the field of education, who design activities such as students' projects, theses, homework assignments, educational games, teaching aids, and marketing collateral. In its very early days, AutoCAD was the only CAD product on the market. It was designed to allow a single user to work at a

---

computer terminal, making documents and drawings using the computer as a tool. AutoCAD's main competitors were BridgeLine and MicroStation, two programs designed primarily for use on mainframe computers and minicomputers. Although BridgeLine was released in 1984, it was not a major competitor to AutoCAD until the end of the decade. According to Autodesk, AutoCAD, BridgeLine, and MicroStation have approximately 800 million licenses and there are 2.2 million registered users. According to Gartner, a vendor

---

of business intelligence, CAD software was the second most used software after Microsoft Office, with 52.9% of Fortune 100 companies using some form of CAD software in 2016. History In the early 1980s, there was no market for CAD tools on personal computers. Almost all the workstations, printers, scanners, and plotters used in offices were based on the minicomputer, and CAD programs for the microcomputer and personal computer had not yet been developed. AutoCAD's first version was Autodesk AutoCAD 1.0, released on December 12,

---

1982. The initial release of AutoCAD was for the Apple II (later renamed IIe), IBM PC compatible, and TI TMS320 microcomputers. The TI version was known as TI Graphic Software, released in November 1982. This was the first version of AutoCAD. Its original release for the Apple II, PC, and TI was a computer program only. Users ran AutoCAD on a monitor and printer in the same room as the computer. An external plotter could be used for plotting, and was required for drafting. AutoCAD did not include a CAD program that was able to

---

perform different types of tasks such as creating a structural design model. The first AutoCAD for IBM PCs was version 2.0, released in August 1983.

According to Autodesk, version 2.0 was a multi-user version that allowed a single person to

AutoCAD and an architecture of Autodesk's Classroom By the numbers the U.S. had 258,000 architects and architecture students in 2009. Just as many students major in architecture and design. They're a vital part

---

of the process. In fact, there is so much value in having an architect on a project that any business that builds more than 3,000 homes is mandated by the federal government to have a registered professional on the project. The government says a professional design manager is essential to the successful completion of the project. Even if the owner is a graduate of an architecture school. And not just any architect can make a project work, according to lead architect Jeremy Evans. "An architect has the skills to look at a design, look at the client's needs, look at the

---

design intent and come up with an innovative design that takes those ideas and applies them to the site, " said Evans. Some of his work includes: Natural gas pipelines, industrial complexes, and hospitals. As an architect, he works with engineers on construction documents. This includes the layout, colors and materials. "The world of architecture has gone digital," said Evans. "A lot of the tools we use have been developed specifically for architectural applications. We've seen rapid change over the last three to four years. In the future, I see

---

that happening even more. " The most popular programs include AutoCAD, one of the most widely used computer-aided design software programs. In 2009, the firm on average had a .38 design team. But Evans said those numbers may not tell the entire story. For example, if a company is doing remodeling work, the design team will be smaller than what it would be if it were a new home. Evans has been at Autodesk since 1999. He now works as Autodesk's education expert. With that, he's designed various Autodesk tools for people to use in their

---

classrooms. Evans said that an educator can create a special classroom exercise in a simple point and click fashion. "Creating online courses is a big part of the future of teaching." he said.

Evans helped in the creation of AutoCAD 360. It has been called Autodesk's answer to PowerPoint. The program creates rich interactive presentations that can be viewed on a website or mobile device. The program's appeal is that it's intuitive. It's meant to allow the average user to create professional looking content. Evans says he's been working with Autodesk's
