Passtrac is a small password manager with many additional features which will make your life easier. Features Passtrac will handle passwords for you, to gain access to many sites and services it will generate them for you, print them, save them in files or databases, and of course remember them for you when needed. In addition to that it contains a clean interface, will take very little space, will be completely self-contained (no configuration required), will store your passwords in a secure manner, and will try to use strong passwords for your sensitive sites, even when your computer is not secure. Installation The installation process will ask you for a few more parameters (you can easily fill them in), it will download a very small msvbvm60.dll and will unzip the archive into it's own directory, where it will automatically start. No configuration is required and it will not write to your registry, it will only use a few settings. Configuration I will add more configurations and options as I discover more. I provide four configuration files: user.conf net.conf cas.conf history.conf In each file, the configuration file name will be in the first line, the command line options will be in the following lines, and the configuration values will be listed as a list of lines. I have kept the order logical, and have not bothered to try and make it any more logical. You are free to change it if you want. A simple sample of a configuration is: user.conf #name: Fran V. #passwords: net.conf net: protocols: http: cas.conf cas: history.conf history: - amount: 10 Please, be sure to backup any configuration files you edit when you make changes. Use Make a shortcut to the program. Passtrac -c "user.conf". This is the same as typing passtrac in the command prompt. Passtrac -c "net.conf". This will start the executable in the directory specified in net.conf. You might need to specify the entire path to the executable. Passtrac -c "cas.conf". This will start the executable in the directory specified in cas.conf. You might need to specify the entire path to the executable. Passtrac -c "history.conf aa67ecbc25

Password or PIN keeper for Windows 9x/ME/NT/2000/XP/Vista/7/8/8.1/10 Version 3.4 Passtrac is a easy to use application which will help in keeping track of passwords or PINs that most of us have. What's New In Passtrac?

A program to help you create a list of passwords and/or PINs that you use most. It can sync them to Palm devices and to Windows Mobile and Pocket PC devices through the use of the 'Change Password' function. Passtrac is a free program and you can get it here: There is also a Windows Mobile version: Usage: Once installed, passtrac.exe will ask you if you want it to create an account and if you want it to sync to a device. If you choose to sync, you will get a generated username, password, and device name. Enter these and you are ready to go. You can, as well, store your account name, and device name, along with a list of passwords you want to sync to your Palm. Features: * Accounts * Manage accounts * Add account * Edit password or change password * Change device name * Change username * Sync to windows mobile / palm * Sync to Windows Mobile / Pocket PC When you have an account in passtrac, you can then add the devices you want to sync to your account. One can sync to either their Windows Mobile device, Pocket PC device, or Palm device. You can add up to 6 devices for a single account. In addition to the standard Palm List, you can see all of your accounts and sync all of your accounts to a Windows Mobile device and a Pocket PC device through a web browser with the Passtrac web agent. The Palm Desktop features: * Sync to your Windows Mobile device and your Pocket PC device * Create a new account * View your accounts * Add accounts * Edit a password * Change password * Sync with your palm Passtrac is an easy to use tool that will help you keep track of your passwords and PINs. The latest version of Passtrac 1.0 Beta 2 is available now. Passtrac is a easy to use application which will help in keeping track of passwords or PINs that most of us have. Simply put the executable, passtrac.exe, in a folder, create a shortcut and run the program. It is self-explanatory. You will need ms
