In this day and age, one of the most common concerns that people have is looking for. You can choose your browser, however, you will lose some features. If you use a Mac OSX machine, I think you can use Safari, but I'm not sure about any other browser. You can choose your browser, however, you will lose some features. If you use a Mac OSX machine, I think you can use Safari, but

I'm not sure about any other browser. You can choose your browser, however, you will lose some features. If you use a Mac OSX machine, I think you can use Safari, but I'm not sure about any other browser. You can choose your browser, however, you will lose some features. If you use a Mac OSX machine, I think you can use Safari, but I'm not sure about any other browser.

Q: Mobile devices not showing icons properly We have Ionic web application deployed on AWS server The problem is - when we access the application on mobile device, no icons are shown. The design for the site works good on other devices, including desktop browsers. We added: after the app was deployed on the server. If we check the files on server, we found the following We also noticed that our chrome extension is not working (spinner shows when it starts loading, but after that, it goes away without showing content) This is the screenshot of the inspected HTML for the mobile device A:

If you are a web developer, you should start using device-specific files like .css, .js, and .png files in your project if you want to build a mobile app. You should copy your app to your mobile device first, then view it on the browser you will develop on. For example, you could use a mobile simulator like Ripple
