## Driver Samsung Syncmaster P2450 23 Fix

if the update was successful, your samsung monitors will be back online and ready to use. the samsung monitor drivers are all checked for compatibility and stability before you have the chance to download them. the kg5229dn should look familiar. it follows the same basic design as the gk5229 series but with a few modifications. the vesa mount means that you can connect it to virtually any wall mounted tv and other display, and if you want to use it in an upright position, you can use the supplied stand. the lcd monitor can be purchased from a variety of retailers including amazon and ebay. generally they should be readily available for purchase. always be sure to check whether your product is factory refurbished or new before purchasing. large retailers will often allow you to upgrade this warranty to 3 months for a minimal fee. however, this is not a common practice among low price retailers and may lead to a faulty monitor being sent to you. it is always safer to buy a factory refurbished monitor and if you experience any fault contact your retailer directly and ask for a replacement. like many other monitors, the p2450 has a delay setting. this is used to make the monitor look responsive and give the impression of a faster screen. a slight delay setting when displaying navigation and even menu items results in a more responsive user experience. if you experience any problems whilst using your samsung monitor, you should first look for any fault codes present on the monitor itself. these fault codes are found on the panel of the monitor. these fault codes should have been programmed into the monitor by the manufacturer, and will help identify the possible fault code by the monitor. if you do not find any fault codes located on the lcd panel itself, then you may look to find fault codes located on the back of the monitor itself. you can do this by lifting up the back panel of the monitor and disconnecting the video cables that lead to your monitor from the back of the monitor. you can then press a small button on the back of the monitor, before replacing the back panel. this will make the lcd panel light up to show where the fault code is located.
