However, it's important that I return the value from the promise object (rather than resolving the promise) until the data arrives back from the server. I'm having trouble making this work. My current code is: `function callWebService(uri, cb){ var dfd = new $.Deferred(); $.ajax({ url: uri, dataType: 'json', success: function(data, status){ dfd.resolve(data); } }); return dfd.promise(); } I'm calling this like so: callWebService('www.example.com/endpoint', function(data){ console.log(data); }); For some reason, console.log(data) only returns the initial data from the promise object. I'm using the latest version of jQuery (I believe) A: You need to return the deferred object from your method, so that it can be resolved by the calling code. function callWebService(uri, cb){ var dfd = new $.Deferred(); $.ajax({ url: uri, dataType: 'json', success: function(data, status){ dfd.resolve(data); f988f36e3a`
